The art unit designated for this application has changed. Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2) such as those in Figure 11. However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 because the sequences in Figure 11 are not followed by a sequence identifier (SEQ ID NO:X). Applicants are reminded that it is required that SEQ ID Nos be amended into the specification at each sequence, and that when a sequence is presented in a drawing regardless of the format or the manner of presentation of that sequence in the drawing, the sequence must still be included in the Sequence Listing and the sequence identifier must be used, either in the drawing or in the Brief Description of the Drawings. Applicants are given the same response time regarding this failure to comply as that set forth to respond to this office action. Failure to comply with these requirements will result in ABANDONMENT of the application under 37 CFR 1.821(g). Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

#### **Restriction/Election Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-10, drawn to a method for identifying a polypeptide that binds a ligand, classified in Class 702, subclass 19.

II. Claims 11-21, drawn to a method for identifying a member of a pharmacofamily involving comparing a sequence of a polypeptide to a sequence model for polypeptides of a pharmacofamily, classified in Class 702, subclass 19.

III. Claims 22-32, drawn to a method for identifying a member of a pharmacofamily involving comparing a sequence of a polypeptide to a sequence model and a differential sequence model, classified in Class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:  
The inventions of groups I-III are independent/distinct among each other because each of the inventions is directed to a separate and distinct invention. The methods as claimed are distinct both physically and functionally, require different process steps, reagents and parameters, and produce different products and/or results. For example, Group I is drawn to a method for identifying a polypeptide that binds a ligand; group II is drawn to a method for identifying a member of a pharmacofamily involving comparing a sequence of a polypeptide to a sequence model for polypeptides of a pharmacofamily; group III is drawn to a method for identifying a member of a pharmacofamily involving comparing a sequence of a polypeptide to a sequence model and a differential sequence model. Consequently, these inventions have acquired a separate status in the art as a separate subject for inventive effect and are usually published separately. The search for each of the above inventions is not co-extensive particularly with regard to the literature search.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).

Applicant is reminded that a fully responsive communication will comprise a proper election of a group, a sequence and/or a species, as well as compliance with the sequence rules as set forth above. Examination cannot proceed without a complete response.
